Why are these items a problem?

Batteries, fluorescent bulbs, and electronics contain a variety of hazardous and toxic materials including lead, mercury, and cadmium. They are banned from the trash because toxic materials can be released, posing a risk to public health & the environment.

Did you know?

The mercury from one fluorescent bulb can ruin 6,000 gallons of drinking water.

*The California Product Stewardship Council works to shift California's product waste management system from government funded programs to a system that relies on **producer responsibility** to reduce public costs and drive improvements in product design. Individuals can play an active role. Visit **www.caproductstewardship.org** to learn more.*

Businesses: See lamprecycle.org for providers who handle fluorescent tubes.
