Napa County weathers early 2017 storms

Severe winter storms have pelted Napa County and most of California during the first two months of 2017. In Napa, substantial damage to County roads has occurred at over 40 sites, with initial estimates over $40 million, for which we are hoping to receive State and Federal disaster relief funding.

One of the most significant damage sites was a landslide on Silverado Trail at Pratt Avenue, at the northern edge of St. Helena. This major artery for the Napa Valley, which serves nearly 10,000 vehicles per day, was closed to all traffic for just over a week, resulting in traffic headaches for those affected. Photos of the slide and the repair are on page 2.

The hills along the western side of the county experienced slides and slipouts resulting in lane restrictions and road closures in many locations. Crews are working diligently to maintain access to properties along Redwood, Dry Creek and Mt. Veeder Roads, though in some locations closures were needed due to unsafe conditions.

Other areas of the county experienced damage as well, including Mund Road and various locations in the communities of Angwin and Circle Oaks, and around Lake Berryessa.

The first priority countywide is to maintain and/or restore access to all properties, with a bare minimum of one lane in restricted areas. Longer-term repairs will require geotechnical evaluation leading to a design solution specific to each site.

Meanwhile, the winter is not over yet! Public Works joins with other first responders in reminding everyone to stay safe!

End of an (editorial) era

by Rick Marshall, Editor

This issue marks my last as editor of P.W. Progress. Since the launch of this publication in Summer, 2011 it has been my pleasure to help the Public Works Department “tell its story.”

Now, 22 issues later, it is time to move on as I make my plans for retirement in May this year.

I have truly appreciated the opportunity to be of service to the people of Napa County. I have loved this work, as I have for my entire 32-year career in county government. It’s been a privilege to add my small contribution to the ongoing work of keeping this a special place.

I have especially valued the opportunity to work with a group of people who all share a passion and dedication to serving the community and even leaving the place better than they found it.

Over the years, many topics have made regular appearances as they represent the bread-and-butter of a Public Works department’s activities: roads, big storms (see above!), new and remodeled County buildings, restoring the Napa River, and more.

The list of regular topics got a lot more interesting in the wake of the departmental reorganization a few years ago, in particular thanks to the addition of the Natural Resources Conservation division, but especially by adding the Animal Shelter!

In this issue, I’ve taken the liberty to select a few of my favorite items – P.W. Progress’ “greatest hits,” if you will. These are some of the offbeat, unusual stories that were not at all regular.

My favorite kind of story.

Thanks everybody!
Scenes from the Storm Front

Flood Control Project – Oxbow Bypass Passes First Test

Heavy rains during storms of December 2016 and January 2017 triggered flow through the Napa River/Napa Creek Flood Control Project Oxbow Bypass (aka Oxbow Commons) for the first time. The Oxbow Bypass is in the right center of the photograph. In the event of a 100-year storm the bypass is designed to divert half the flow around the Oxbow and back into the Napa River. Completed in 2015, the bypass can begin diverting flow with a 6-year storm event.

Phil Miller, Deputy Director – Flood Control/Water Resources

Silverado Trail/Pratt Avenue Landslide

Top photo: View of slide and unstable uphill slope before repair.

Center photo: Completed repair consists of steel beams drilled vertically into the pavement, which support stacks of concrete “K-rail”. Traffic side is protected by guardrail, painted reflective white for visibility. Reduced road width has been restriped to maintain two-way traffic; bicycles must use caution.

Bottom photo: The new catchment wall got its first test within the first week! Note that the vegetation which came down with the slide material is level with the top K-rail. The wall held and did its job!

Major slide on Redwood Road outside Napa

Left: aerial view of landslide which originated at the top of a ridge above Redwood Road, west of Napa. Right: about ½ mile from the city limit, about 5,000 cubic yards of material came down on the road. Residents and businesses above this location had to loop around Mt. Veeder Road, a detour of approximately 15 miles.
The Basin Analysis Report for the Napa Valley Subbasin was presented to the Board of Supervisors at a Special Meeting on December 13, 2016.

At that meeting, the Board approved the report and its submittal to DWR. The Report was submitted to DWR on December 16, 2016. DWR provided a 60-day public comment period on the report, which ended on February 15, 2017. DWR has now extended the public comment period until April 1, 2017. Comments may be provided to DWR via the DWR SGMA Portal for Alternatives and Reporting.

A hard-copy of the report is available for review at the Napa County Flood Control and Water Conservation District office, 804 First St., Napa, (707) 259-8600.

The 2014 Sustainable Groundwater Management Act (SGMA) provides a framework for sustainable management of groundwater resources by local authorities. The act establishes a timeline - 20 years - to implement actions that achieve long-term groundwater sustainability. It protects existing surface water and groundwater rights and does not impact drought response measures.

The California Department of Water Resources (DWR) is in charge of the SGMA Program and has developed guidelines for local agencies to follow. DWR has also prepared a SGMA brochure to explain the requirements under the Act. A good summary of the SGMA can be found on the Association of CA Water Agencies website.

Napa County and its groundwater consultant completed work to meet the requirements of SGMA, which was in the form of a Basin Analysis Report (one of the Alternatives to a Groundwater Sustainability Plan defined in the Act). This report, Napa Valley Groundwater Sustainability - Basin Analysis Report for the Napa Valley Subbasin, provides an extensive analysis of the groundwater basin and demonstrates it has operated within its sustainable yield and that it is being managed consistent with the goal of SGMA and DWR regulations.

The completed report can be downloaded from the Watershed Information and Conservation Council(WICC) website: http://www.napawatersheds.org/app_pages/view/8240

For medium and high priority groundwater basins/subbasins, a Basin Analysis Report or other Alternative must be submitted to DWR by January 1, 2017. The Napa Valley Subbasin (map) is the only basin in Napa County with a medium priority ranking by DWR that is subject to SGMA at this time.

Patrick Lowe,
Natural Resources Conservation Manager
A hero among us

Napa County roads worker Dave Rojas was honored Wednesday morning for recently helping a family escape their car after it got stuck in floodwaters on Lodi Lane.

Dave was putting out "Road Closed" signs during the stormy weather when he saw the mother and son in distress.

“They were in a fetal position yelling for help in the car,” Rojas said. "My adrenaline was 15, but I kept calm. …I would do it all over again.”

Dave was given a card from the family and a coin from the Napa County Sheriff’s Office.

Thanks to Dave for his Commitment to Community.

Preserving the history of our roads

The County Surveyor’s office has the responsibility of maintaining the official road records of Napa County. These records date back to the mid-1850s and contain written descriptions of the surveyed locations of County roads, often with a map of the route attached. They provide important information regarding the history of the road network in our county, in addition to providing a look at both the land and landowners of long-ago.

Bound in massive old ledger books with the maps glued, taped, and folded in between pages, these records were deteriorating quickly. The County Executive Office approved the restoration of these unique records, and in January 2017 we received the restored books, each carefully unbound, cleaned, scanned, and beautifully rebound to guard against further deterioration.

The newly restored books allow easy access to these records without compromising their integrity. The scanned pages make it even easier to access needed information and provide it to public users upon request. Please contact Surveying Services staff if you would like to view these records or need assistance with research.

Lake reaches impressive levels

Even though it’s not operated by Napa County Public Works, it’s still big news in the neighborhood!

While the eyes of the state (and the nation) are following the devastating news from dams in Oroville, Morgan Hill and elsewhere, Napa’s own Lake Berryessa weathered the storm while quietly reaching near-record heights (of water level, that is).

The water in the lake reached an elevation of 443.5 feet on February 21 – the highest in 11 years.

The lake’s spillway is a different design than the traditional surface channels such as has become famous in Oroville. It uses a vertical tube which only receives flow when the lake level reaches 440 feet, at which point it overflows the tube which carries it to an outfall in Putah Creek below. This design is affectionately known as the “Glory Hole.”

The highest level ever recorded was 446.7 feet, in 1983. The lake has only reached the Glory Hole 26 times in its 56 year history.

2014 – Somebody Broke Our (Historic) Bridge!
On May 5, the bridge at Trancas Street/Monticello Road/Silverado Trail which carried eastbound traffic across Milliken Creek, turning right from Trancas to Silverado, was severely damaged in a collision.

The damaged bridge was built in 1908, and is listed in the National Register of Historic Places.

2014 – Napa area hit by 6.0-magnitude earthquake
At 3:24 a.m. on August 24, 2014, a 6.0-magnitude earthquake struck southern Napa County. It has been reported as the largest earthquake to strike the Bay Area since the Loma Prieta quake in 1989, which measured 6.9. Substantial damage occurred throughout the community, as was well-reported in local, regional and international media.

2015 – Lights on (and flashing) for safety
Locations on Las Amigas Road and North Kelly Road now feature curve-warning signs which utilize wireless communication and solar power to enhance the warning. LED lights outline the standard “chevron” shape, and they illuminate in sequence to “guide” drivers through the curve.

2015 – Time Capsule Ceremony at Historic Courthouse
During construction of the barrier, crews discovered a “time capsule” in the newel post of the grand staircase, which had been placed there during a remodel project in 1979.
On May 12, a ceremony was held to unveil the contents and commemorate that era.

2015 – Adopt-a-Road Hits Milestone
For more than 20 years, Eagle Cycling Club has helped maintain a segment of Silverado Trail in Napa County, keeping it clear from debris and trash as part of the county’s Adopt-a-Road program. Eagle Cycling is one of many organizations that provide this service on roads throughout the County, but is the first to reach the 20-year milestone.

2016 – That’s the way the cookie (c)rumbles
The rumble treatment is accomplished using a new product which is made of the same thermoplastic material as the stripe itself. The small disks, known affectionately as “cookies,” include crystals for maximum reflectivity during dark hours, and are spaced every couple feet to provide a tactile and audible response when a vehicle begins to leave the main travel lane.

About Napa County Public Works...
The Department of Public Works is dedicated to sustaining health, safety, quality of life and protection of natural resources by providing and maintaining public facilities and services in partnership with the community and other public agencies for current and future residents, workers, visitors and animals of Napa County.

Public Works values...
- Fiscal Responsibility
- Accountability
- Transparency
- Integrity
- Service
- Teamwork
